

**COURSE SYLLABUS**

**SEATS**

**Site Environmental Awareness Training Scheme**

**Suitable For:**

Site supervisors and managers

**Course Aim:**

This one day interactive course has been developed with the aim of providing candidates with an introduction to environmental issues on construction sites.

It is designed to meet the basic environmental knowledge that the sub-contract chain are required to prove to major contractors, and covers the environmental aspects of the new HS&E touch screen test.

The course will bring the candidates' environmental and sustainability knowledge up to date by giving a thorough overview of the subject, relevant legislation and industry best practice.

**Course Content will include:**

- The environment and why it matters
- Environmental management systems
- Ecology
- Contaminated land
- Waste management
- Pollution prevention and water management
- How to be a good neighbour: statutory nuisance, communication, archaeology and heritage
- Energy and resources
- Being a responsible contractor

**Course Objectives:**

On successful completion of this course, candidates will be able to identify, control and minimise the environmental impacts of their work, identify environmental improvement opportunities, implement environmental/sustainability policies or practices, share examples of best practices for managing key risks and opportunities and focus on best practice techniques and legal compliance.

**Venue:** Either on-site at clients' premises or at ITS Training Centre

**Duration:** 1 Day

**Candidates:** Up to 12 per course

**Certification:** CITB ConstructionSkills Site Safety Plus Certificate
